23- N	Metabolism	is the	in a livin	g organism.
-------	------------	--------	------------	-------------

- 1. process by which cells are divided
- 2. total of all chemical processes
- 3. process by which cells are organized into groups
- 4. process of reproduction

24-Producers are the green plants that

1. must live near the sea

2. consume other organisms

3. are only found in forests

4. make their own food

25-The different word is

1. conditions

2. circumstances

3. state

4. output

26-Weathering is the process of

1. the formation of soil

- 2. making a soil mature
- 3. repeated expansion and contraction
- 4. the breaking down of rocks

27- Water flows downhill very rapidly but moves very slowly

- 1. extensive
- 2. extensively
- 3. horizontal
- 4. horizontally
- - 1. leaves and nowhere else

2. the fruits of certain plants

3. cells containing chlorophyll

4. leaves as well as stem tissues

Many types of newly-formed seeds, however, will not germinate until they have passed through a period of rest called dormancy. Their coats, for example, may at first be impervious to water or oxygen, as time passes, however, the seed coats are either cracked by alternate freezing and thawing, as the temperature rises and falls, or eroded by the destructive action of soil bacteria and fungi. Biologists believe that the dormancy of seeds enables certain plant species to survive periods of frost and drought

29-Many types of newly-formed seeds, however, will not germinate until they have passed through a period of rest called dormancy. Their seed coats, for example, may at first be impervious to water or oxygen; as time passes, however, the seed coats are either cracked by alternate freezing and thawing, as temperature rises and falls, or eroded by the destructive action of soil bacteria and fungi.

Biologists believe that the dormancy of seeds enables certain plant species to survive periods of frost and drought which would otherwise kill the tender seedling.

1. bacteria and fungi

2. destructive action

3. certain plants

4. frost and drought

- 30-According to this passage many newly-formed seeds may not germinate because their seed coats
 - 1. have been eroded by bacteria and fungi
- 2. are cracked by freezing and thawing
- 3. have passed through a period of rest
- 4. allow water or oxygen to pass through
